Biome Group Project Instructions and Guidelines

**Project Requirements**

1. Each group must prepare a 15 - 20 minute presentation about the biome that they have selected.

2. Each group must create a poster that provides information and pictures about their biome.

3. Each group must prepare a media presentation to accompany their class presentation. This can include a PowerPoint, Google Slides, or Discovery Ed. Board.

4. Each group must create a short video that shares information about their biome in a creative way.

5. Presentations must address all of the key questions below, as well as other information that

**Other Things to Consider**

- Grades for this project are based on my evaluation of your work, research, and presentation. Grades will also reflect your classmates assessment of your presentation and your group members’ assessment of your work on the project.

- Assign roles within your group. You can work more efficiently by letting each group member work on the areas of the project where they are strongest.

- Each group member must participate equally in the presentation.

- Keep a list of all sources that you use during this project (internet, books, people, etc.) This information will need to be included with your research in your science journal!

The following key pieces of information must be included in your presentation, but you should also add any other information about your biome that you feel is interesting and important:

1. Where is your biome located on earth and what is its climate like?

2. What are the biotic and abiotic factors of your biome, and how do they make your biome unique?

3. Based on your research, what do you think that it would be like to live in your biome?

4. What are the three most interesting things you discovered about your biome during your research?
